SUMMARY

Results-driven Machine Learning Engineer with experience in building and deploying ML/DL models across computer vision, NLP, and time-series tasks. Skilled in creating end-to-end ML pipelines, working with LLMs, and using tools like TensorFlow, PyTorch, and Scikit-learn to develop practical AI solutions.

WORK EXPERIENCE

Machine Learning Intern (AI/ML)

Oct 2025 – Apr 2026

InLighnX Global Pvt. Ltd.

- Engineered a Traffic Sign Recognition system using CNN on the GTSRB dataset (50K+ images, 43 classes), achieving ~95% classification accuracy
- Developed multi-model sales forecasting pipeline (ARIMA, SARIMA, LSTM) for Walmart dataset, achieving 90–93% accuracy with automated retraining support
- Designed an Energy Consumption Forecasting system with LSTM & SARIMA architectures, delivering 92–95% prediction accuracy for real-time energy management
- Built and validated a Pneumonia Detection model using CNN on chest X-ray datasets, achieving 92–95% diagnostic accuracy
- Developed ANAKIN, a real-time multimodal AI assistant integrating STT, TTS, OpenCV, and LLMs via Groq API (LLaMA-3.1-8B-Instant) for voice-driven automation
- Implemented and benchmarked ML models for heart disease prediction, stock price forecasting, Bitcoin prediction, and fake news classification
- Executed full ML lifecycle: data preprocessing, EDA, feature engineering, hyperparameter tuning, model evaluation, and Streamlit-based deployment

Machine Learning Engineer Intern

May 2024 – June 2024

Innodatatics

Text Emotion Analysis using LLM |

- Architected an LLM-based emotion classification system supporting 16 emotion categories with grammar scoring and filler word detection
- Achieved BLEU: 45.12 and ROUGE-L: 67.35, demonstrating strong language understanding and generation quality
- Built a Streamlit + PostgreSQL full-stack application, improving team efficiency by 20% and reducing manual review workload by 50%

Bird Detection & Tracking (YOLOv8x)

Aug 2023 – Sept 2023

- Trained YOLOv8x model on 4,981 images with age-based classification
 - Achieved 0.96 Precision/Recall/F1, 0.95 mAP@0.5
 - Built real-time tracking using OpenCV and deployed the system with Flask, improving efficiency by 20% and reducing manual workload by 15%
-

CERTIFICATE

Data Science Certification – NASSCOM

Oct 2023

EDUCATION

Bachelor of Engineering (Mechanical)

New Horizon College of Engineering, VTU

Aug 2014 – Jun 2021

SKILLS

Python, Microsoft Azure, SQL, GitHub, PyCharm, Scikit-learn, XGBoost, TensorFlow, PyTorch, Pandas, NumPy, Matplotlib, Power BI, Time Series (ARIMA, SARIMA, LSTM), NLP, Deep Learning, Streamlit, Flask, Hugging Face, LLMs, AI Agents.
